

Helical Communication Antenna

This helical antenna is designed for radio communication and signal transmission. It features a coiled helical element connected to a straight rod and a base.

Product Overview

High-Performance Helical Antenna

This helical communication antenna is engineered for reliable radio frequency signal transmission and reception. Featuring a distinctive coiled helical element atop a rigid rod, it is optimized for efficient signal propagation in demanding communication environments. The robust base assembly ensures secure mounting and stable connectivity for professional radio systems.

Technical Specifications

Construction

- Red helical coil element
- Straight support rod
- Integrated black and red mounting base

Primary Use

Radio Communication • Signal Transmission • RF Reception

Antenna Type

Helical

Design Features

Coiled Helical Element, Rigid Rod Support, Signal Transmission Optimized
