

# Helical Gear Speed Reducer

This helical gear speed reducer provides efficient mechanical power transmission for industrial applications. Its design ensures quiet operation, high torque transmission, and a long service life.

## Overview

### In-Line Helical Gear Reducer (FR Series)

The FR Series In-Line Helical Gear Reducer is a robust and efficient mechanical power transmission component designed for a wide range of industrial applications. Featuring a helical gear design, it ensures smooth and quiet operation, high torque transmission, and an extended service life. The in-line configuration allows for direct coupling to motors and driven equipment, simplifying installation and reducing overall space requirements.

## Technical Features

### Typical Applications

- Conveyors
- Mixers
- Pumps
- General industrial machinery

### Design Highlights

In-line configuration, Hardened gears, Durable housing, Reliable lubrication system, High torque transmission

## Certifications & Compliance

### Certifications

ISO 9001 • CE Certified

### Global Export Reach

38 Countries
