

Hematite Lab Sample Grinding Disc

Grinding disc designed for hematite lab sample preparation in geological, metallurgical, and material science applications. Its durable construction and internal bowl shape ensure efficient sample containment and consistent particle size reduction.

Product Overview

Precision Grinding Solution

This precision-engineered grinding disc is specifically designed for hematite lab sample preparation. Featuring a robust construction with a durable black finish, it offers excellent resistance to wear and corrosion, ensuring a long operational lifespan. The internal bowl shape is optimized to facilitate efficient sample containment and consistent particle size reduction, making it an essential tool for geological, metallurgical, and material science laboratories.

Technical Specifications

Design Features

- Internal bowl shape for efficient containment
- Wear-resistant black finish
- Corrosion-resistant coating

Primary Application

Hematite lab sample preparation

Mounting System

Evenly spaced mounting holes for secure equipment attachment

Industry Usage

Compatible Industries

Geological, Metallurgical, Material Science
