

Hematite Pellet Production Line

Production line designed for processing hematite raw materials into pellets. System includes rotary kiln and cold machine for efficient production.

Overview

Hematite Pellet Production Line

This industrial production line is designed for the comprehensive processing of hematite raw materials. The system integrates advanced analysis, rotary kiln technology, and cold machine processing to ensure efficient manufacturing. Originally commissioned in 2008, this facility represents a complete, turnkey solution for high-volume pellet production.

Technical Milestones

Commissioning Year	2008
Design Completion Year	2006

System Capabilities

Processing Stages

- Raw material analysis
- Rotary kiln processing
- Cold machine processing

Key Features	Turnkey Supply, Industrial Scale, Hematite Processing, Integrated System
