

Hermetically Sealed Refrigeration Compressor

Hermetically sealed compressor designed for refrigeration applications. It features thermal overload protection and operates on 220-240V at 50/60Hz with a single-phase power supply.

Overview

V Series Hermetically Sealed Compressor

The V Series hermetically sealed compressor is engineered specifically for reliable refrigeration applications, such as domestic and commercial fridges. This unit is designed for optimal efficiency with R134a refrigerant, featuring a cooling capacity of 75W at -23.3°C. With integrated thermal protection and robust construction, it ensures consistent performance in standard cooling environments.
