

Hidden Tile Press for Metal Forming

This metal forming machine is designed for producing hidden tiles. It features a robust construction and precise engineering to ensure high-quality tile production.

Overview

Precision Metal Forming Solution

The FX41-210-420-type hidden tile press is a specialized metal forming machine engineered for the high-volume production of hidden tiles. Featuring robust construction and advanced hydraulic systems, this rolling mill ensures consistent, high-quality output for large-scale manufacturing operations. It incorporates automated feeding and output mechanisms to support continuous, efficient production cycles.

Technical Specifications

Model Designation	FX41-210-420
Machine Type	Hidden Tile Press (Rolling Mill)

Operational Features

Control System

- Adjustable tile length
- Adjustable pressing force
- Automated feeding mechanism
- Integrated output collection system

Operation Mode

Continuous Operation • Hydraulic Powered
