

High Bay Induction Lighting System

This high bay induction lighting system is ideal for large manufacturing facilities. The lighting fixtures are suspended from the ceiling via coiled cables to provide consistent illumination.

Product Overview

High-Performance Industrial Illumination

This high-intensity induction lighting system is engineered for large-scale manufacturing environments and industrial facilities. Designed for uniform light distribution, the fixtures utilize advanced induction technology to ensure reliable operation and consistent illumination across expansive workspaces. The system is compatible with overhead track and suspension structures, making it an ideal choice for modern workshops and assembly plants seeking efficient, long-term lighting solutions.

Technical Specifications

Lighting Technology	Induction Lighting
Best For	Manufacturing Facilities, Assembly Plants, Large Workshops, Industrial Warehouses

Installation & Design

Mounting Configuration

- Suspended via coiled cables
- Overhead track compatible
- Support structure integration

Key Design Features

High-Intensity Output • Uniform Illumination • Maintenance-Friendly
