

High-Capacity Lithium-Ion Battery Pack

This high-capacity lithium-ion battery pack contains multiple 18650-sized cells arranged in a matrix configuration. The pack is designed for applications requiring high energy density and reliable power delivery.

Product Overview

High-Performance Energy Storage

This high-capacity lithium-ion battery pack is engineered for applications demanding superior energy density and reliable power delivery. Utilizing a robust matrix of 18650-sized cells, it is secured within a custom-designed plastic frame that optimizes both structural integrity and thermal management. The integrated series-parallel configuration ensures consistent voltage and capacity, while the pre-installed wiring and connectors allow for seamless integration into your existing power systems.

Technical Specifications

Cell Size	18650
Configuration	Series-Parallel Matrix
Thermal Management	Yes

Design & Build

Housing	Custom-designed plastic frame
Integration Features	Integrated Wiring, Standardized Connectors, Structural Frame
