Product Overview

High-Performance Cutting Solution

These High Carbon Steel Hacksaw Blades are engineered for general-purpose cutting across a variety of materials including mild steel, wood, and plastics. Featuring precision-milled tooth patterns, they ensure smooth and efficient material removal for professional and DIY applications. The hardened teeth provide extended service life and consistent performance in demanding workshop environments.

Material & Construction

Tooth Treatment

Hardened Teeth • Precision-Milled

Blade Material

High Carbon Steel

Technical Specifications

Cutting Characteristics

- Smooth material removal
- Efficient cutting action
- Consistent performance
- Extended tool life

Length Options

Standard lengths available

Applications

Recommended Use

- Metalworking
- General Workshop Use
- DIY Projects

Compatible Materials

Mild Steel, Wood, Plastics
