

High-Density Network Hardware Connector

This high-density connector is designed for network hardware applications. It ensures reliable signal transmission in computer network equipment with its robust housing and precision-engineered pins, suitable for various networking needs.

Overview

High-Density Network Hardware Connector

This high-density connector is engineered for reliable signal transmission in demanding computer network equipment. Featuring multiple rows of precision-engineered pins, it ensures secure and stable connections for complex hardware setups. Its robust housing design provides durability, making it an ideal solution for various high-density networking applications.

Technical Specifications

Connector Type	High-density network hardware connector
Pin Configuration	Multi-row
Application Suitability	Computer Networking, Signal Transmission, High-Density Interconnects

Design Features

Construction

Robust Housing • Precision-Engineered
