

High Density Patch Rack for Cable Management

This high-density patch rack is designed for efficient cable management in server rooms and network environments. Constructed from durable materials, these racks provide a stable and organized solution for terminating and connecting network cables.

Overview

High-Density Cable Management Solution

This high-density patch rack is engineered for efficient cable management within demanding server rooms and network environments. Constructed from durable, high-quality materials, it provides a stable and organized foundation for terminating and connecting network cables. The design features clearly labeled ports to facilitate easy identification and rapid patching, ensuring network maintenance and upgrades can be performed with minimal downtime.

Technical Specifications

Available Models

- KF-TJ-100(A)
- KF-TJ-300(A)
- KF T J-100(8)

Key Features

High Density • Clearly Labeled Ports • Durable Construction

Suitable Environments

Server Rooms, Network Cabinets, Data Centers
