

High-Efficiency Gas Turbine Rotor Assembly

This high-efficiency gas turbine rotor assembly is designed for power generation and industrial use. It features multi-stage axial compressor and turbine blades optimized for aerodynamic performance and high-temperature operation.

Product Overview

High-Efficiency Rotor Assembly

This high-efficiency gas turbine rotor assembly is engineered for demanding power generation and industrial applications. It features a multi-stage axial compressor and turbine blades specifically optimized for superior aerodynamic performance and high-temperature operation. Constructed with advanced, durable materials, this assembly ensures reliability in critical environments such as metallurgy, mining, and nonmetal mining engineering projects.

Technical Specifications

Key Design Features

- Multi-stage axial compressor
- Optimized turbine blades
- High-temperature operation capability
- Advanced material construction

Performance Highlights

1 Level

Aerodynamic Optimization

1 Grade

High-Temp Rating

Industry Applications

Metallurgy, Mining, Nonmetal Mining Engineering, Power Generation
