

High-Efficiency Photovoltaic Module

This module effectively reduces installation costs while increasing generating capacity. It is widely applicable in various project installations.

Product Overview

High-Efficiency Solar Solution

This high-efficiency photovoltaic module is engineered to reduce installation costs while maximizing energy generation capacity. Utilizing crystalline silicon solar cells with high-transmission textured glass, it delivers reliable performance for diverse solar projects. Built with a robust, corrosion-resistant frame, the module is designed for long-term mechanical stability and consistent power output.
