

High-Efficiency Polycrystalline Silicon Solar Panel

This high-efficiency polycrystalline silicon solar panel is designed for grid-tie applications in residential and commercial settings. It features durable construction and provides high power output, with excellent performance in low-light conditions.

Overview

High-Efficiency Solar Solution

This high-efficiency polycrystalline silicon solar module is engineered for both residential and commercial grid-tie applications. It features durable construction and is optimized for excellent performance even in low-light conditions. Designed for long-term reliability, the module is fully certified to meet rigorous industry standards for safety and power output, making it an ideal choice for reducing electricity costs.

Technical Features

Cell Technology	Polycrystalline Silicon
Application Suitability	Residential, Commercial, Grid-Tie

Performance & Quality

Performance Highlights

- High power output
- Excellent low-light performance
- Durable construction
- Long-term reliability

Compliance

Industry Certifications

Safety Certified • Performance Verified
