

High-Fidelity Vacuum Tube Amplifier

This high-fidelity vacuum tube amplifier is designed for audiophiles seeking a warm and rich sound. It features a Class A single-ended design with premium vacuum tubes for exceptional clarity and detail.

Product Overview

High-Fidelity Sound Engineering

The SF-1 is a premium high-fidelity vacuum tube amplifier meticulously crafted for audiophiles who demand a warm, rich, and highly detailed sound profile. Utilizing a Class A single-ended design, this unit delivers exceptional sonic clarity for professional and enthusiast audio systems. Its robust construction is balanced by an elegant aesthetic, ensuring it serves as a high-performance centerpiece for any audio setup.

Technical Specifications

Amplification Class	Class A single-ended
Transformer Type	Toroidal
Build Quality	Precision Resistors, High-Grade Capacitors, Low-Noise Design

Connectivity & Features

Input Versatility

- Multiple source compatibility
- High-fidelity signal routing

Design & Build

Robust Chassis • Elegant Aesthetics • Vacuum Tube Architecture
