

High Frequency Angle Grinder

This high-frequency angle grinder is a handheld power tool used for grinding and polishing. It features a powerful non-magnetic motor and a super abrasive blade.

Product Overview

Engineered for professional use, this grinder offers high material removal rates and precise control.

High-Performance Angle Grinder

This high-frequency angle grinder is a versatile handheld power tool engineered for efficient grinding, abrasive cutting, and material polishing. Designed for professional use in construction, metalworking, and industrial maintenance, it features a robust motor capable of handling demanding applications with ease. The unit combines high material removal rates with precise control, ensuring consistent performance even in challenging work environments.

Technical Specifications

Voltage	220 V
Frequency	50 Hz
Power Input	800 W
No Load Speed	9500 r/min

Features

Designed for demanding industrial applications, ensuring reduced operator fatigue.

Ergonomic design with auxiliary handle ensures comfortable and safe operation during extended use.

Design Highlights

Ergonomic Handle • Robust Motor • High Frequency • Industrial Grade

Primary Applications

Grinding, Cutting, Polishing, Metalworking, Construction
