

High-Friction Brake Pads with Steel Backing Plates

These brake pads offer optimal stopping power and durability. They incorporate a high-friction compound for consistent braking performance and feature high-strength steel backing plates for enhanced stability.

Product Overview

High-Performance Braking Solution

These high-friction brake pads are engineered for optimal stopping power and exceptional durability under demanding conditions. Featuring a specialized high-friction compound, they deliver consistent braking performance across a wide temperature spectrum. The assembly includes high-strength steel backing plates designed to enhance structural stability while effectively reducing noise during operation.

Technical Specifications

Backing Plate Material	High-strength steel
Key Performance Features	High-Friction Compound, Wide Temperature Range, Noise Reduction, Enhanced Stability

Installation & Compatibility

Included Components

- Brake Pads
- Installation Shims
- Mounting Hardware

Application Suitability

Universal Compatibility • Various Vehicle Applications
