

High Head Slurry Pump for Mining

This slurry pump is designed for mining applications requiring high head capacity. It efficiently handles abrasive and corrosive slurries, ensuring reliable performance in demanding industrial environments.

Product Overview

High Head Slurry Pump for Mining

This series of cantilevered, horizontal centrifugal slurry pumps is engineered for the transport of highly abrasive and high-concentration slurries. Designed to withstand demanding industrial environments, these units offer robust performance and can be configured as multi-stage series pumps to meet specific operational requirements. They are widely utilized across the metallurgy, mining, coal, and power sectors for reliable, long-term material handling.

Technical Specifications

Compliance & Standards

CE • ISO 9001 • UKAS • Environmental Management System

Operational Capabilities

- Handles highly abrasive slurries
- Handles high concentration slurries
- Supports multi-stage series installation
- Designed for extended service life

Pump Configuration

Cantilevered, horizontal centrifugal

Suitable Applications

Mining, Metallurgy, Coal Processing, Power Generation
