

High-Performance Water Circulation Pump

This high-performance water pump is designed for various applications. It features a robust motor, durable construction, and efficient water circulation.

Product Overview

High-Performance Circulation

This high-performance water circulation pump is engineered for demanding fluid management applications. Built with a robust motor and durable materials, it ensures reliable and consistent water flow. It is perfectly suited for integration into spa and whirlpool systems where efficiency and performance are critical requirements.

Technical Specifications

Performance Features

- Robust motor design
- Durable construction
- Consistent fluid circulation

Series

LX Series

Motor Type

Single Phase Motor

Primary Applications

Spas, Pools, Whirlpool Systems
