

High-Performance Water Pump, 300-480 l/min, 60-55m Head

This high-performance water pump is designed for demanding agricultural and construction applications. With a maximum capacity of 300 to 480 liters per minute, it efficiently moves large volumes of water.

Overview

High-Performance Water Management

This high-performance water pump is engineered for demanding agricultural and construction environments. It features a robust design capable of handling large volumes of water, making it a reliable solution for irrigation, drainage, and industrial water transfer tasks. The sturdy frame ensures durability and simplifies transportation, providing an essential tool for efficient water management.

Performance Metrics

Flow Rate

300 l/min
Min Capacity

480 l/min
Max Capacity

Total Head

55 m
Min Head

60 m
Max Head

Applications

Suitable Applications

Agricultural Irrigation, Construction Drainage, Water Transfer

Design Features

Key Design Features

- Robust construction
- Sturdy protective frame
- High-performance engine
- Easy transportation design
