Product Overview

Superior Winter Performance

This high-performance winter tire is engineered with a high silica enriched compound that remains flexible at low temperatures for extreme chill resistance. It features an advanced directional tread pattern with deep grooves and sipes that ensure superior traction and water dispersion on snow and ice. The design incorporates an extra-wide shoulder for enhanced driving and cornering stability, delivering a quiet, comfortable ride in challenging conditions.

Technical Specifications

Stability Metrics

1 Reduced
Braking Distance

1 Enhanced
Cornering Stability

Key Performance Attributes

High Silica Compound, Directional Pattern, Extreme Chill Resistance, Enhanced Water Dispersion, Quiet Operation

Application

Vehicle Suitability

- Passenger Cars
- SUVs
