

High-Precision Lathe for Electrification Projects

This lathe machine is designed for electrification projects, especially in rail transit. It features a robust construction, advanced control, and versatile machining capabilities for turning, facing, and threading.

Product Overview

High-Precision Lathe for Electrification

This high-precision lathe is engineered specifically for demanding electrification projects, with a focus on rail transit engineering applications. The machine features robust construction and an advanced control system, ensuring reliability in industrial environments. It is designed to handle a versatile range of turning, facing, and threading operations with high efficiency.

Technical Specifications

Primary Application

Rail Transit Engineering • Electrification Projects

Model Number

CK6130

Machining Capabilities

Turning, Facing, Threading

Key Features

Operational Highlights

- Robust construction for industrial durability
- Advanced control system
- User-friendly interface
- Integrated safety features
