

High-Pressure Die Casting Machine

This high-pressure die casting machine is designed for efficient and precise metal part production. It features a robust frame, advanced hydraulic system, programmable control, and safety interlocks.

Overview

High-Pressure Die Casting Solution

The EM 800 is a high-pressure die casting machine engineered for the efficient and precise production of complex metal parts. Featuring a robust frame and an advanced hydraulic system, it ensures reliable mold clamping and injection performance. Equipped with a programmable control system and integrated safety interlocks, this machine is designed for automated, high-tolerance manufacturing in aluminum, zinc, and magnesium alloys.

Technical Specifications

Model	EM 800
Compatible Alloys	Aluminum, Zinc, Magnesium

Key Features

Core Features

- Robust frame construction
- Advanced hydraulic mold clamping system
- High-precision injection system
- Programmable automated control system
- Integrated safety interlocks

Application Solutions

Available Turnkey Solutions

Solution Category

Aluminum Cookware Utensil A-Z

Non-stick/Ceramic coating line

Aluminum pressure cooker project

Aluminum coil forming line

Aluminum circle blanking line

Glass lid forming line
