

High-Pressure Indicator Valve

High-pressure indicator valves are designed for use in marine and industrial applications. These valves are constructed from durable materials and feature a handwheel for precise control.

Product Overview

High-Pressure Indicator Valve

These high-pressure indicator valves are engineered for demanding marine and industrial applications, serving as essential components for precise pressure monitoring and control. Featuring a robust construction and a handwheel for manual operation, they ensure reliable performance in critical systems. Designed for durability, these valves are compatible with a wide range of fluid types.

Compatibility

2-Stroke Engine Compatibility

S26MC, L35MC, S35MC, L42MC, S42MC, S46MC-C, L50MC, S50MC/-C, L60MC, S60MC/-C, L70MC, S70MC, L80MC, S80MC, K80MC/-C

4-Stroke Engine Compatibility

L16/24, L20/27, L23/30, L23/30A, L28/32, L28/32A, L28/32H

Design Features

Key Features

- High-pressure rating
- Manual handwheel control
- Robust industrial design
- Suitable for marine applications
