

High Pressure Oil Governor with PLC Control

This high oil pressure governor is a precision control device for industrial applications requiring accurate oil pressure regulation. The unit features a programmable logic controller (PLC) for advanced control and monitoring.

Overview

Precision Control for Industrial Applications

The High Pressure Oil Governor is a precision control device engineered for industrial environments that demand accurate and reliable oil pressure regulation. Equipped with an integrated Programmable Logic Controller (PLC), this unit offers advanced control and real-time monitoring capabilities. It is housed in a robust, floor-mounted cabinet, making it a durable solution for critical industrial processes where stability is paramount.

Technical Specifications

Mounting Type

Floor-mounted

Model Number

WWT-80

Control System

PLC Microcomputer Governor (PLC@: h)

Monitoring & Interface

Monitoring Features

- Analog pressure gauges
- Status indicator lights
- Clear viewing section for internal inspection

Primary Function

Oil Pressure Regulation, Precision Control, Industrial Automation
