

High Pressure Polyurethane Foam Spray Machine

This high-pressure machine is designed for spraying polyurethane foam for insulation. It features a dual-component mixing system and is mounted on a wheeled cart for mobility.

Product Overview

High-Performance Polyurethane Spray Solution

This high-pressure polyurethane spray foam insulation machine is engineered for versatility and precision in industrial and construction environments. Featuring a compact, portable design with a pneumatic motor and a high-precision proportion pump, it is ideal for site work ranging from wall and roof insulation to waterproof polyurea applications. The system includes an integrated heating system, emergency safety switches, and a self-cleaning filter to ensure consistent, reliable performance on demanding projects.

Technical Specifications

The machine features a comprehensive control panel, pressure gauges, and temperature controllers for precise spraying operation.

Certifications

CE

Model Number	XBFG89469
Automation Level	Automatic
Pressure System	High Pressure
Screw Design	Single-Screw
Cleaning System	Self-clean Filter

Key Features

Core Features

- Lightweight and portable for site work
- Pneumatic motor drive
- High-precision proportion pump
- Integrated main machine heating system
- Emergency stop safety switch

Applications

Usage Scenarios

Wall & Roof Insulation, Polyurea Waterproofing, Anticorrosion Coating, Seam Filling, Cold Storage Insulation, Tank & Pipe Insulation, Package Cushioning
