

High-Pressure Turbine Casing Gasket and Washer Set

This set includes a gasket and washer designed for high-pressure turbine casings. The components ensure a leak-proof seal and even distribution of pressure, maintaining joint integrity.

Product Overview

High-Pressure Turbine Casing Gasket and Washer Set

This high-pressure turbine casing gasket and washer set is engineered for demanding industrial environments. Designed to provide a reliable, leak-proof seal under extreme operating conditions, the assembly ensures the integrity of critical turbine connections. The precision-engineered washers are included to ensure even pressure distribution, effectively preventing deformation and maintaining joint stability during operation.

Technical Specifications

Key Features

- Leak-proof seal design
- High-pressure resistance
- Precision-engineered washer assembly
- Even pressure distribution

Performance Highlights

1 High

Seal Integrity

1 Even

Pressure Distribution

Application	High-pressure turbine casing
Construction Materials	Cast Metal, Industrial Grade Sealant
