

High-Security Multi-Point Locking System

These high-security locking systems feature robust construction and multiple locking points for enhanced protection. The collection includes surface-mounted and mortise-style locks, constructed from durable materials such as hardened steel and brass.

Product Overview

High-Security Multi-Point Locking System

This high-security locking system is engineered for superior protection against forced entry, utilizing a robust multi-point design. Crafted from durable materials like hardened steel and brass, it offers reliability for both residential and commercial security needs. The system features advanced components such as multi-pin cylinders and reinforced strike plates to ensure long-term tamper resistance.

Technical Specifications

Materials

- Hardened Steel
- Brass

Mechanism Type

Multi-Point, Surface-Mounted, Mortise-Style

Security Features

Security Features

Multi-pin Cylinder • Reinforced Strike Plate • Tamper-Resistant

Application

Suitable Applications

- Residential
- Commercial
