

High-Speed Automatic Glove Overlock Sewing Machine

This high-speed automatic glove overlock sewing machine is designed for efficient and precise seaming of gloves. It features advanced automation for increased productivity and consistent stitch quality.

Overview

High-Efficiency Glove Production

This high-speed automatic glove overlock sewing machine is engineered for intelligent, multi-functional performance in industrial settings. It utilizes mature technology to ensure consistent stitch quality, precise positioning, and high efficiency for mass glove manufacturing. With robust construction and user-friendly controls, it is designed to minimize operator intervention while maximizing output.

Performance & Features

Key Capabilities

- Automatic overlocking functionality
- Precise sewing and accurate positioning
- High-speed operation for mass production
- Adjustable settings for various glove sizes and materials
- Integrated control panel for parameter adjustment
