

High Speed Bottle Filling and Sealing Machine

This high-speed machine fills and seals bottles at a rate of up to 40,000 units per hour. It utilizes a multi-head filling system and a precision sealing mechanism for efficient packaging.

Overview

High-Performance Filling & Sealing System

This industrial-grade machine is engineered for high-speed liquid and semi-liquid packaging environments. It utilizes an advanced multi-head filling system paired with a high-precision sealing mechanism to ensure output consistency. Built with durable stainless steel, it meets rigorous hygiene standards while offering fully automated control and monitoring for optimized line efficiency.

Performance Metrics

Production Capacity

40000 BPH

Throughput

Technical Features

Core Features

- Multi-head filling system
- Precision sealing mechanism
- Integrated automated control panel
- Stainless steel construction

Suitable Products

Liquid, Semi-liquid

Build Quality

Construction Material

Stainless Steel
