

High-Speed Centrifugal Separator for Marine and Industrial Use

This high-speed centrifugal separator is engineered for efficient separation of liquids and solids. Its robust construction ensures durability and reliable performance in marine and industrial settings.

Product Overview

High-Performance Separation Technology

This high-speed centrifugal separator is engineered for demanding marine and industrial separation tasks, ensuring optimal fluid purity. Designed for durability, the unit excels in fuel oil purification and lube oil cleaning, providing reliable performance in harsh operational environments. It is a critical component for maintaining equipment health and operational efficiency in both maritime and industrial plant settings.

Technical Specifications

Core Features

- High-speed rotation for efficient solid-liquid separation
- Robust construction for enhanced durability
- Engineered for reliable performance in demanding environments

Construction Standards

Heavy-duty • Industrial Grade

Primary Applications

Marine, Industrial, Fuel Oil Purification, Lube Oil Cleaning
