

High-Speed Diesel Locomotive for Passenger Transport

This high-speed diesel locomotive is designed for passenger transport. Its streamlined, aerodynamic design reduces drag and improves fuel efficiency.

Overview

High-Speed Passenger Performance

The DF11 is a specialized high-speed diesel locomotive engineered specifically for passenger transport services. Its design prioritizes aerodynamic efficiency, featuring a streamlined exterior that minimizes drag to optimize fuel consumption during transit. Equipped with a robust diesel engine and sophisticated control systems, this locomotive ensures smooth and reliable operation for demanding rail schedules.

Design & Exterior

Color Scheme

Blue • White

Key Design Features

Streamlined Aerodynamics, High-Speed Passenger Design

Technical Specifications

Primary Application

High-speed passenger rail services

Propulsion System

Diesel Engine
