

High-Speed Electric Motor for Appliances

This electric motor features a compact design and dynamically balanced rotor. It is engineered for high-efficiency performance and long service life in appliances.

Overview

High-Performance Appliance Motor

This high-speed electric motor is engineered for demanding appliance applications, such as vacuum cleaners and similar high-suction devices. Featuring a compact and robust design, it incorporates precision-engineered armature windings and a dynamically balanced rotor to ensure smooth, vibration-free operation. Built for longevity and efficiency, this unit provides the reliable power necessary for professional-grade appliance performance.

Technical Specifications

Key Performance Metrics

1 High-Speed

Operation Type

Suitable Applications

- Vacuum Cleaners
- High-Suction Appliances
- Small Household Appliances

Design Features

Compact Design, Dynamically Balanced Rotor, High-Efficiency
