

High-Speed Eyelet Buttonhole Sewing Machine

This high-speed eyelet buttonhole sewing machine is designed for efficient and precise buttonhole creation. The machine is engineered for industrial use, offering robust performance and reliability for high-volume production.

Product Overview

High-Speed Eyelet Buttonhole Machine

The GF31168-6 is a high-speed eyelet buttonhole sewing machine designed for efficient and precise buttonhole creation. Engineered for industrial use, this machine offers robust performance and reliability for high-volume production environments. It features advanced mechanisms that ensure accurate stitching and consistent results, making it an ideal solution for manufacturers in the garment, shoe, and accessory industries looking to enhance their production capabilities.

Technical Specifications

Key Performance Features

- High-speed operation for increased throughput
- Industrial-grade robust construction
- Advanced stitching mechanism for precision
- Consistent buttonhole quality

Model Number	GF31168-6
Primary Applications	Garment Manufacturing, Footwear, Accessories

Operational Safety

Safety Indicators

Caution Required • Industrial Use Only
