

High Speed Handpiece Bearing

This is a high speed turbo handpiece bearing. It is designed for efficient torque transmission and optimal illumination.

Product Overview

Precision Dental Engineering

This high-speed dental handpiece is engineered for demanding procedures that require exceptional precision and reliability. It features a sophisticated triple-gear system designed for efficient torque transmission, ensuring smooth operation and minimal wear. The compact head design allows for enhanced maneuverability, while integrated optics provide optimal illumination of the operating field for the surgeon.
