

High-Speed Steel Chamfer Cutter

High-speed steel chamfer cutters are used for deburring, countersinking, and creating angled edges. The cutters have precision-ground cutting edges for smooth and accurate chamfering.

Product Overview

Precision Chamfering Solution

These high-speed steel (HSS) chamfer cutters are engineered for professional-grade deburring, countersinking, and creating angled edges. Featuring precision-ground cutting edges, they ensure smooth and accurate performance across metalworking, woodworking, and plastics fabrication applications. The versatile design includes a standard cylindrical shank, making it fully compatible with a wide range of drill chucks and collets.

Technical Specifications

Key Features

- Precision-ground cutting edges
- Smooth and accurate chamfering
- Versatile material compatibility

Size Specification

25 mm

Diameter

60 mm

Length

Material	High-Speed Steel (HSS)
Primary Applications	Metalworking, Woodworking, Plastics Fabrication, Deburring, Countersinking
Shank Compatibility	Cylindrical shank (standard drill chucks and collets)
