

High-Speed Steel End Mill

This high-speed steel end mill is designed for precision cutting and material removal. It features a multi-flute design for efficient chip evacuation and reduced vibration.

Product Overview

High-Performance Cutting Solution

This high-speed steel end mill is engineered for precision cutting and efficient material removal in industrial environments. Featuring a specialized multi-flute design, it ensures optimal chip evacuation while minimizing vibrations during operation. The tool is coated to provide superior wear resistance, significantly extending its service life across a wide range of applications.

Technical Specifications

Design Features

- Multi-flute design
- Enhanced wear-resistant coating
- Vibration reduction geometry

Material Composition

High-Speed Steel (HSS)

Compatibility

Application

Precision Cutting • Material Removal

Suitable Materials

Steel, Aluminum, Plastics
