

High-Speed Submersible Well Pump

This high-speed submersible well pump is suitable for various water pumping applications. It features a high-efficiency motor and durable stainless steel construction.

Product Overview

High-Speed Submersible Well Pump

This high-speed submersible well pump features a 4-inch oil-filled asynchronous motor paired with an external frequency conversion control system and a multi-stage centrifugal pump body. Designed to break through traditional performance bottlenecks, it offers a significant improvement in efficiency compared to standard well pumps. The system is engineered for reliable operation in demanding water extraction environments.

Technical Specifications

Available Flow Rates

- 3
- 8
- 15
- 22
- 32

Motor Type	4-inch oil-filled asynchronous motor
Motor Power Range	2.2kW - 11kW
Pump Body Design	Multi-stage centrifugal
