

High-Speed Textile Spinning Machine

This high-speed textile spinning machine is designed for efficient yarn production. It features automated yarn winding, tension control, and a robust frame for continuous operation.

Overview

High-Performance Yarn Production

The High-Speed Textile Spinning Machine is engineered for maximum efficiency and reliability in large-scale manufacturing environments. Built with a robust frame for continuous, heavy-duty operation, it ensures consistent output through advanced automated systems. Its integrated tension control and high-speed winding capabilities make it an essential solution for professional facilities seeking to optimize yarn production quality.

Key Metrics

Operational Speed

61 m/min

Output Rate

Technical Features

Core Functionalities	Automated yarn winding, Tension control, Robust frame, Continuous operation
Suitability	Large-scale textile manufacturing facilities
