

# High-Speed Three-Thread Overlock Sewing Machine with Elastic Control

This high-speed three-thread overlock sewing machine is equipped with a microcomputer elastic controller. It is designed for processes requiring elasticity, such as disposable non-woven caps and coats, and allows presetting of rubber muscle elasticity.

## Overview

### Precision Elastic Control

The M3300-3/N067 is an industrial-grade, super high-speed three-thread overlock sewing machine engineered for high-efficiency garment production. It features an integrated microcomputer elastic controller that allows for precise, fine-tuned adjustments to elastic tension and feed rates. This robust machine ensures consistent, high-quality seams across a wide variety of fabric types, making it an essential tool for professional sewing operations.

## Technical Specifications

**Speed Capability**  
Super High-Speed

**Machine Type** Three-thread overlock sewing machine

**Control System** Microcomputer-based elastic controller

## Key Features

### Performance Highlights

**3 threads**  
Thread Count

**Suitable Applications** Garment Industry, Elastic Attachment, Industrial Use
