

High Static Pressure Ducted Air Conditioning Unit

This air conditioning unit is designed for concealed installation and high static pressure applications. It delivers efficient cooling and heating through flexible ductwork, suitable for customized air distribution.

Overview

High Static Pressure Ducted Unit

This high static pressure ducted air conditioning unit is engineered for concealed installation, making it an ideal choice for environments requiring discreet climate control. Its robust construction ensures reliable cooling and heating performance in both residential and commercial settings. With flexible ductwork options, it allows for customized air distribution to meet specific layout requirements.
