

High-Strength Steel Lifting Chain

High-strength chains are designed for lifting and securing heavy loads. Constructed from hardened alloy steel, these chains offer durability and resistance to wear, suitable for construction, rigging, and industrial settings.

Overview

Heavy-Duty Lifting Solutions

This high-strength steel lifting chain is engineered for demanding industrial applications requiring reliability and durability. Constructed from hardened alloy steel, the chain offers exceptional resistance to wear and tear, making it suitable for heavy-duty lifting, rigging, towing, and construction tasks. The specialized finish provides critical corrosion protection, ensuring longevity even in challenging environments.

Technical Specifications

Surface Finish

Black Finish • Corrosion Resistant

Safety Features

- Proof testing performed
- Load rating verification

Material Options

Alloy Steel, Carbon Steel, Stainless Steel

Applications

Primary Applications

- Heavy-duty lifting
- Securing loads
- Rigging
- Towing
- Industrial construction
