

High-Tensile Bolt Cutters

These bolt cutters are designed for cutting bolts, rods and other metal materials. They feature hardened steel jaws, ergonomic handles and a compound action mechanism.

Product Overview

High-Tensile Performance

These high-tensile bolt cutters are engineered for industrial-grade performance, capable of shearing through hardened rods, bolts, and heavy-duty metal materials. Equipped with hardened steel jaws and a compound action mechanism, they provide exceptional leverage and cutting power with minimal user effort. The ergonomic handle design ensures comfort and control, making this an essential tool for construction sites, general maintenance, and mechanical repair tasks.

Technical Specifications

Jaw Material	Hardened Steel
Cutting Mechanism	Compound Action

Key Features

Key Features	High-Tensile Capacity, Compound Action, Ergonomic Grip, Hardened Durability
--------------	---

Applications

Suitable Applications

- Construction
- Equipment Maintenance
- General Mechanical Repair
- Metalworking
