

High-Voltage Circuit Breaker

This high-voltage circuit breaker provides reliable and efficient protection for electrical power systems. Its robust construction and advanced insulation technology ensure safe operation in demanding environments.

Product Overview

ZHW1-252 High-Voltage Circuit Breaker

The ZHW1-252 is a high-voltage circuit breaker designed for reliable and efficient protection of electrical power systems. This unit features robust construction and advanced insulation technology, ensuring safe operation in demanding environments such as substations and industrial facilities. It is engineered for long-term performance, minimal maintenance, and critical protection against overcurrent and short-circuit faults.

Technical Specifications

Rated Voltage

252 kV

Maximum Voltage

Primary Applications

Substations, Industrial Facilities, Power Systems

Design and Quality

Key Features

- Robust construction
- Advanced insulation technology
- High reliability
- Low maintenance requirement

Protection Functions

Overcurrent Protection • Short-circuit Protection
