

Horizontal CNC Machining Center

This high-precision horizontal machining center is designed for complex part manufacturing. It features a robust frame, advanced CNC control system, automatic tool changer, and coolant system for efficient material removal.

Overview

High-Precision Horizontal Machining Center

This horizontal machining center is engineered for the complex manufacturing of precision parts. It features a robust frame construction, an advanced CNC control system, and an automatic tool changer to ensure high accuracy and repeatability. Equipped with an integrated coolant system, it is designed for efficient material removal across a variety of industrial machining applications.

Technical Specifications

Model	JN-H50
Machine Type	Horizontal CNC Machining Center

Key Features

Performance Highlights

1 Grade
High Accuracy

1 Grade
Repeatability

Core Features

High-Precision, Robust Frame, Advanced CNC Control, Automatic Tool Changer, Integrated Coolant System
