

Horizontal Cutting Blade for Metalworking

This high-precision horizontal cutting blade is designed for smooth and accurate cuts. It is constructed from durable, high-grade steel for an extended lifespan and consistent performance.

Product Overview

High-Precision Metalworking Blade

This high-precision horizontal cutting blade is engineered for smooth, accurate cuts in demanding metalworking environments. Constructed from high-grade, durable steel, it offers an extended operational lifespan and consistent performance. The precisely engineered tooth geometry ensures optimal material removal while significantly reducing vibration during operation.

Technical Specifications

Material Composition	High-grade steel
Cutting Orientation	Horizontal

Performance Features

Application Suitability

- Professional metalworking
- High-precision horizontal cuts
- Clean and efficient cutting action

Key Performance Benefits	High-precision, Reduced vibration, Optimal material removal, Consistent performance
