

Horizontal Drum Mixer for Powders and Granules

This horizontal mixer is designed for efficient and homogenous mixing of various materials. It features a robust steel frame construction for stability and durability.

Overview

Efficient Horizontal Mixing Solution

This horizontal drum mixer is engineered for the precise and homogenous blending of powders and granules. Featuring a robust steel frame construction, it ensures long-term stability and operational durability in demanding industrial environments. The horizontal orientation is specifically designed to facilitate efficient material loading and seamless discharge, optimizing your production workflow.

Design & Construction

Frame Material	Steel
Drum Orientation	Horizontal

Operational Features

Drive System	Electric motor with belt drive
Control Interface	Control panel with buttons and indicators
Discharge Location	Bottom discharge port

Key Advantages

Key Benefits	Homogenous Mixing, Robust Construction, Easy Loading, Precise Control
