

Horizontal Metal Cutting Band Saw

This horizontal band saw is designed for cutting metal profiles, pipes, and solid materials. It features a robust frame, hydraulic blade tensioning, variable speed control, and coolant system for efficient and precise cutting operations.

Overview

Industrial Horizontal Band Saw

This horizontal band saw is engineered for high-performance cutting of metal profiles, pipes, and solid materials. Built with a robust frame for stability, it features advanced hydraulic blade tensioning and variable speed control for precise, efficient operations. Equipped with an integrated coolant system, this machine is an essential tool for professional industrial metalworking environments.

Technical Specifications

Model Identifier	GB4270
Cutting Capabilities	Metal Profiles, Pipes, Solid Materials

Key Features

Machine Features

- Robust frame construction
- Hydraulic blade tensioning
- Variable speed control
- Integrated coolant system

Application Suitability

Industrial Use • Metalworking
