

# Horizontal Metal Cutting Band Saw

This horizontal band saw machine is designed for cutting metal profiles and solids. It features a robust frame, hydraulic clamping system, variable cutting speed, and coolant system for enhanced cutting performance and extended blade life.

## Overview

### Precision Metal Cutting Solution

This horizontal band saw machine is engineered for high-performance cutting of metal profiles and solids. It features a robust, durable frame construction and an integrated hydraulic clamping system to ensure stability and precision during operation. Equipped with a variable cutting speed and a dedicated coolant system, it is designed to maximize cutting performance while significantly extending blade service life.

## Technical Specifications

### Cutting Capabilities

- Metal profiles
- Solid metal stock

### Key Features

Hydraulic Clamping, Variable Speed, Coolant System, Robust Frame

## Performance Metrics

### Performance Highlights

**1 Optimized**

Blade Life Extension

**1 Hydraulic**

Clamping Type
