

Horizontal Ringlock Scaffolding Ledger

The Ringlock Ledger is a horizontal scaffolding component for secure connections in Ringlock systems. It provides structural support and a safe platform with robust locking mechanisms for quick attachment to Ringlock rosette connectors, ensuring stability and load-bearing capacity.

Product Overview

Structural Versatility and Stability

The Horizontal Ringlock Scaffolding Ledger is a vital horizontal component engineered for rapid integration into Ringlock scaffolding systems. Crafted from high-strength steel, this ledger provides essential structural support and creates a stable, safe foundation for working platforms. Its robust locking mechanisms allow for efficient attachment to standard Ringlock rosette connectors, ensuring consistent load-bearing capacity and structural integrity for professional construction sites.

Technical Specifications

Key Features

- Quick-locking end mechanisms
- High load-bearing design
- Horizontal structural bracing
- Standard rosette connectivity

Safety Compliance

Load-bearing • Secure Locking

Material Composition

High-strength steel

System Compatibility

Ringlock System, Rosette Connectors
